

LIST OF PREVIOUS PROJECTS HAVE BEEN WORKED ON

No	Project Name	Client	Project Description	My Scope	Technology Used
1	Electronic Bookbuilding (EBB)	Indonesia Stock Exchange	Bookbuilding is a process in company stocks transaction. In this process IDX will blast a notification to all potential investor about the start and end date of bookbuilding. Emiten will then define the starting price for their stock, then investors will make an offer to the price in EBB system. Then EBB do its calculation based on starting price and investor offers, resulting the end price for the stocks. After the end price known, investors need to reconfirm their order with the end price.	Front end job like creating a page, form, routing each page, and also work with database in importing the existing data to the system	.NET, C#, Javascript, HTML, CSS, SQL Server

2	ERP extension module	OLSO System Integrator for Communication	Building and integrating 3rd party application to works with the ERP.	They are : 1. Project management : this system already exist in the ERP but the client wants the UI to be better and also auto generating some field 2. Forex rate scrapper : I create a scrapper to scrap a web page of ministry of finance that updated weekly. To insert currency exchange data to the ERP database. 3. Adjustment Journal Generation : at the end of month, accounting need to create adjustment journal based on revenue and expense for each projects. This	Visual Basic, SQL Anywhere (Sybase), PHP
3	Inventory System	Stone mining company	Creating inventory system to maintain stocks of stones and vehicle that deliver it.	Creating master data pages and stocks report	PHP, Laravel, Crystal Report

4	Web based ERP	Household appliance distributor company	Creating ERP from scratch.	modules I created : 1. Journal 2. Recurrence 3. Balance Calculation 4. Master data 5. Revaluation 6. Netting 7. Invoice AR 8. Reports 9. COA 10. Background process	C#, .NET, PostgreSQL, Xtra Report, DevExpress
5	Consumer Finance and Leasing Solution application extension	IT Solution company	As their partner, I must work on their products and make additional function that integrate seamlessly	These what I made : 1. Integrate the application with their client application (OLSO) 2. Synchronize journals through API 3. Journal grouping via backend process	C#, .NET, SQL Server

6	SIPEDULI	OJK	Fintech company that are under supervision of OJK are obliged to submit report about their activities. SIPEDULI is a web that cover that needs.	I extent some existing module, like adding functionality to send email to the companies as report reminder. I also add User activities logging, including change password periodically function, system maintenance notifications, and more.	C#, .NET
7	Healthcare Dashboard	Hospital	Creating healthcare dashboard that contain patients history, their inspection documents, and doctors	I worked on their front-end for they already provide the backend API for me	Vue.js, Chart.js, axios
